Email/Newsletter inclusion language:

Massachusetts is taking another step towards its goal of Internet For All. With your help, we can update the internet accessibility maps and ensure the state's broadband investments work for you.

The Massachusetts Broadband, Equity, Access and Deployment (BEAD) Program Challenge Process is an opportunity for residents to share inaccuracies in current broadband data by submitting evidence such as speed test data. Residents view the data on the existing map and submit evidence by visiting [howsyourinternet.org](https://www.howsyourinternet.org) from Thursday, June 20 to Saturday, July 20.

For members of the community that may not have access to the internet, we encourage that you welcome them to a location where they might use a computer terminal or tablet to view the map and/or submit evidence.

Units of local and tribal government, internet service providers and non-profit organizations registered as eligible entities will have the ability to submit challenges on behalf of residents. Organizations and others registered as eligible entities are encouraged to help their communities understand and utilize the opportunity to submit speed test data and internet availability challenges.

Here are some steps you can take:

- Read more about the [Massachusetts Challenge Process](#);
- Enter the portal to submit a challenge or register as an eligible entity;
- Familiarize yourself with the [FCC Broadband Map](#); and
- Test Your Internet Speeds through a [speed test](#).
